Colorado Natural Heritage Program

The Colorado Department of Transportation considers potential impacts to wildlife, including threatened and endangered species, when planning highway improvements. The Colorado Natural Heritage Program (CNHP) at Colorado State University is a valuable source of ecological data.

Since the mid-1990s, CNHP has completed ecological inventories in approximately half of Colorado's counties. These inventories have focused on Colorado's Front Range and mountain counties.

CNHP's studies are available online at:
http://www.cnhp.colostate.edu/
