State Implementation Plan

The Clean Air Act delegates to each state the responsibility to develop and implement plans to meet national ambient air quality standards. For each applicable pollutant, the State prepares a State Implementation Plan, or SIP.

For example, the Ozone Action Plan for the Denver/North Front Range area is a part of the Colorado SIP for that pollutant.

The Colorado Department of Public Health and Environment assists local or regional agencies in the development of plans which are then considered for approval by local governments, the Colorado Air Quality Control Commission, and the U.S. Environmental Protection Agency.

A SIP may include commitments to implement transportation control measures, such as street sweeping to keep dust off roadways. A SIP also may set a motor vehicle emissions budget, which limits the amount of emissions allowed from traffic on a regional roadway system.
