Conformity Regulations

The Clean Air Act includes transportation “conformity” requirements to ensure that Federal transportation funding and approvals go only to transportation activities that are consistent with Federal clean air goals.

Conformity regulations apply to Federally-funded transportation projects and short-term Transportation Improvement Programs (TIPs) and long-range metropolitan transportation plans in areas that do not meet or previously have not met the national air quality standards. Forecasts of future traffic volumes and vehicle emissions are analyzed to determine whether or not transportation projects would cause or contribute to a future violation of air quality standards.

Regulations: 40 CFR 93, Subpart A;
Colorado Air Quality Control
Commission Regulation 10
