Public Participation

Public participation is an important element of decision making for transportation projects and other Federal actions under the National Environmental Policy Act.

Public participation is more than just a hearing, or one meeting near the end of the project development process. It is an early and continuing part of the transportation and project development process.

It is essential that the project sponsor knows the community's values in order to avoid, minimize, and mitigate impacts, as well as to narrow the field of alternatives and alignments. The community also needs to understand the constraints and tradeoffs of transportation planning and project decisions. Public understanding of a project's purpose and need can help to streamline the process to final project approval.
