Cypress Spurge

(Euphorbia cyparissias)

The Colorado Noxious Weed Act requires every landowner to **eradicate this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Cypress spurge is a low growing perennial. Its narrow, linear leaves are approximately 0.5 to 1.25 inches long. Stems are 4 to 32 inches tall, hairless, green to yellowish green in color and branch in the upper portions. Flowers are yellowish-green usually turning reddish green towards maturity and are clustered in bunches at the ends of stems.

Contact with the plant should be avoided because the milky sap can cause skin irritation to humans. More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
