info

05-0107-11

This card features a photograph of the aquatic plant Hydrilla verticillata. The plant is shown as a dense, green, branching mass. At the top left, there is a circular icon with a silhouette of the plant. At the bottom right, there is a large question mark icon with the word 'general' above it and 'info' below it. Along the bottom edge, there are four smaller circular icons: a blue one, a pink one, a black one with a boat, and an orange one with a boat.

Hydrilla

(Hydrilla verticillata)

The Colorado Noxious Weed Act requires every landowner to **eradicate this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Hydrilla is a submersed **AQUATIC** plant that can grow to the surface and form dense mats. The stems are slender, branched, and up to 25 feet long. The leaves are small and pointed. They grow in whorls of four to eight around the stem. The leaf margins are distinctly saw-toothed. This plant produces tiny white flowers on long stalks. It also produces overwintering buds at the leaf axils and tubers attached to the roots in the mud.

Hand-pulling offers short-term control, while dredging is effective but cost-prohibitive. More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
