Common Tansy

(Tanacetum vulgare)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Common tansy is a perennial plant that grows 1.5 to 6 feet tall. Its yellow flowers are numerous in flat-topped dense clusters at the tops of the plants. The button-like flower heads lack ray flowers. The leaves are alternate, deeply divided into numerous narrow, individual leaflets. Stems are often purplish-red and extensively branched towards the top.

Cutting or pulling are ineffective methods for controlling this species. **The plant is considered toxic, so use protective equipment when handling it.** More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
