Dalmatian Toadflax

(broadleaf)

(*Linaria dalmatica*)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

There are two closely related species called Dalmatian toadflax. The **broadleaf** variety is a perennial forb that grows up to 3 feet tall. It has bright yellow snapdragon-like flowers with an orange throat on elongated racemes. The alternate leaves are broad, with a thick, waxy cuticle and a bluish cast. Each leaf is heart-shaped and wraps the stem.

Because of the high genetic variability of the toadflax species, two local populations may respond differently to the same herbicides. More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
