

Quackgrass
Elytrigia repens

05-0226-11

general info

This identification card features a green circular icon with a grass silhouette in the top left. The main image shows several stalks of quackgrass with their characteristic spikelets. At the bottom, there are four small circular icons: a blue one, a pink one, a black and white one, and an orange one. To the right of these is a large brown circular icon containing a white question mark and the text 'general info'.

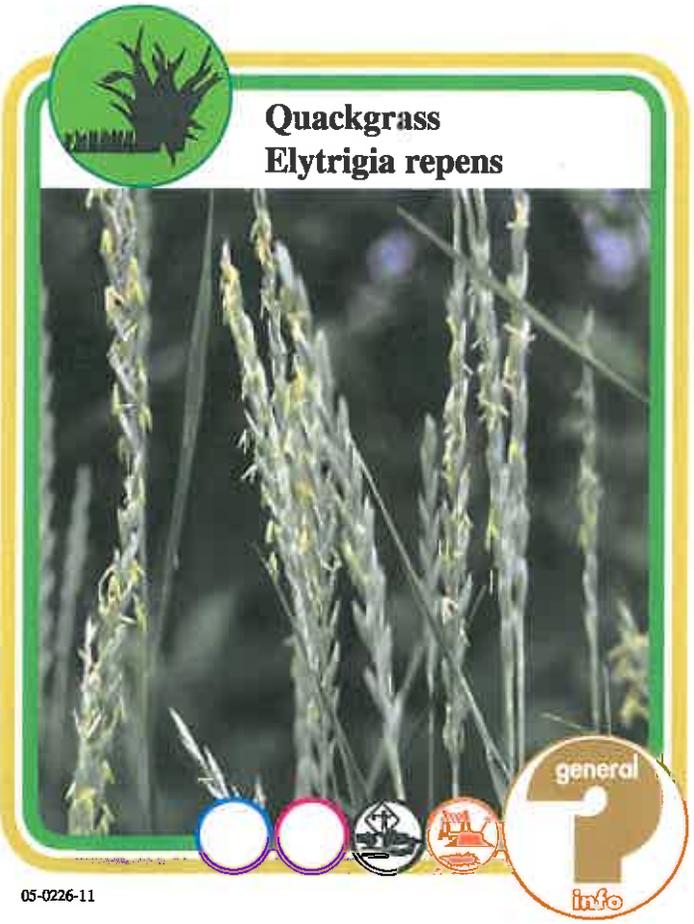

Quackgrass

(*Elytrigia repens*)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Quackgrass is a perennial grass that grows to 1 to 4 feet tall if unmowed. Its spikelets are in 2 long rows and borne flatwise to the stem. The florets have short, straight awns or are awnless. The hairless leaves of quackgrass are constricted near the tips. Leave blades are 0.25 to 0.5 inches wide, flat and pointed.

The key to control of quackgrass is preventing the establishment of dense stands. Once it becomes established, it is hard to control. More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
