## Yellow Toadflax

(*Linaria vulgaris*)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Yellow toadflax, also called “butter and eggs,” is a perennial that grows 1 to 3 feet tall. The leaves are narrow, linear, and 1 to 2 inches long. The stems are woody at the base and smooth toward the top. The showy flowers resemble snapdragons. They are bright yellow with a deep orange center and have a spur as long as the entire flower. This plant develops an extensive root system.

Handpulling or digging is not recommended for eradication of yellow toadflax because it is unlikely that the entire root will be excavated and thus, a new plant is likely to sprout. More details about this species and controlling it are available online at <http://www.colorado.gov/ag/weeds>.
