## Wetlands Delineation Manual Supplements

The Colorado Department of Transportation identifies wetlands that may be affected by highway projects using the national Wetlands Delineation Manual that is maintained by the U.S. Army Corps of Engineers (USACE).

The USACE has also developed a number of region-specific supplements that must be used, depending upon the wetland's setting. The three supplements applicable within Colorado address the following settings:

- Great Plains
- Western Mountains, valleys, and Coast
- Arid West

The development of Regional Supplements is part of a nationwide effort to address regional wetland characteristics and improve the accuracy and efficiency of wetland delineation procedures.
