

Wetland Restoration

01-0018-11

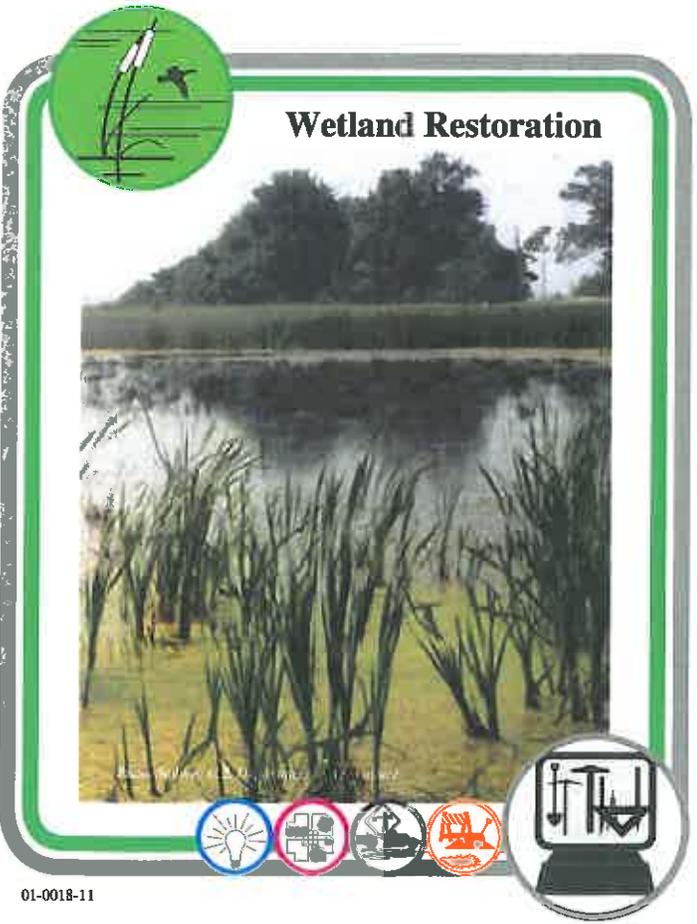

This card features a central photograph of a wetland with tall grasses and a body of water. It is framed by a green border. In the top-left corner, there is a circular icon depicting a reed and a bird. At the bottom, there is a row of five circular icons: a lightbulb, a cross, a boat, a crane, and a scale. A larger circular icon of a scale is positioned at the bottom right.

Wetland Restoration

When a Colorado Department of Transportation project adversely affects wetlands, one option for mitigating these impacts is wetland restoration.

The U.S. Army Corps of Engineers defines restoration as “the manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural/historic functions to a former or degraded aquatic resource. For the purpose of tracking net gains in aquatic resource area, restoration is divided into two categories: reestablishment and rehabilitation.”

Regulations: 40 CFR 230, Compensatory Mitigation for Losses of Aquatic Resources
