Rare Plant Field Guide

A useful tool for the identification of rare plants in Colorado is the Rare Plant Field Guide. This guide was developed in 1997 and updated in 2002 for several federal agencies by the Colorado Natural Heritage Program.

The guide presents photos, drawings and basic data regarding Colorado's 14 threatened or endangered plant species plus 170 other sensitive species.

As part of the environmental process for CDOT roadway improvements, qualified biologists examine the project area to determine whether or not any rare plants are present. If rare plants are present, efforts are made to avoid, minimize and mitigate any adverse impacts, in accordance with requirements of the Endangered Species Act and CDOT's Environmental Stewardship Guide.
