Preble's Meadow Jumping Mouse
(*Zapus hudsonius preblei*)

This small rodent has an extremely long tail, large hind feet and long hind legs. It has a distinct dark, broad stripe on its back that runs from head to tail and is bordered on either side by gray to orange-brown fur. The adult is approximately 8 to 10 inches long, with over 60 percent of this being the tail.

Habitat: Typical habitat for this species is well-developed plains riparian vegetation with adjacent, relatively undisturbed grassland communities and a nearby water source. These riparian areas include a relatively dense combination of grasses, forbs, and shrubs. This mouse is found in 13 Colorado counties along the Rocky Mountain Front Range from Wyoming to Colorado Springs.
