## **Greenback Cutthroat Trout (*Oncorhynchus clarki stomias*)**

Federal status: Threatened  
Colorado status: Threatened

This trout, named Colorado's state fish in 1994, has dark, round spots on the sides and tail and two colorful blood-red stripes on each side of the throat under the jaw, hence the name "cutthroat." During the spring spawning season the entire belly may become crimson red. The greenback grows to a maximum length of 18 inches.

This species was designated as Colorado's official state fish in 1994.

Habitat: This species prefers cold, clear, gravelly headwater streams and mountain lakes which provide an abundant food supply of insects. It is found in 22 Colorado counties.
