

# What is Level of Service?

The conditions characterizing Intersection/Roadway Level of Service (LOS) are:

## Intersection

## Roadway

Minimal or no vehicle delay

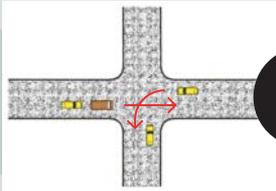

**A**

Best operating condition, is considered free-flow

Slight delay to vehicles

**B**

Represents reasonably free-flowing conditions

Vehicle delays are moderate, traffic flow still stable and acceptable

**C**

Constrained constant flow below speed limits

Delays at intersections may become extensive

**D**

Approaching unstable flow

Very long queues may create lengthy delays

**E**

Unstable flow near capacity

Severe delays and traffic congestion

**F**

Worst conditions with heavy congested flow, traffic demand exceeding capacity
